Production with Cyclone Classifier

Less super fines

The amount of super fine particles in powder coating is one of the most important parameter affecting the performance of the application. The amount of super fine particles are 10-15% with cyclone collection mode which is standart milling mode. In cyclone classifier mode this amount is reduced to 5-7%. Thanks to less super fine particles, It provides less dusting in the cabinet, less recycle, less waste and less accumulation inside the hose pipes.

Codification: 1D904S9016 cyclone collecting mode %10-15 < 10 µ
1D904**C**9016 cyclone classifier mode   % 5-7   < 10 µ

1
Less dusting in the cabinet

2
Less recycle and waste

3
Less accumulation inside the hose pipe
